KAMIRAI

WHITEPAPER V2.0

The exchange token of Kyorai.

26 OCTOBER 2026 | BNB SMART CHAIN

CONTENTS

What this paper covers.

This document describes the public state of KAMIRAI and Kyorai after the presale, the mechanics of the token, the fee engine and the risks that come with it.

01 Executive summary

03 The Kyorai product

05 Close of the presale

07 Fee engine and buyback policy

Important notice. This document is information only. It is not an offer to sell, a solicitation to buy, or financial, legal, tax or investment advice. Digital assets are volatile and may lose all value. No return is promised. Verify every contract and venue before you act.

Readers should treat this paper as a description of a live product and a public token, not as a promise about future price or liquidity.

01 / EXECUTIVE SUMMARY

From presale to public market.

KAMIRAI is the exchange token of Kyorai, a live noncustodial DEX aggregator on BNB Smart Chain. The presale is closed. The token now trades on Biconomy and is scheduled to open on MEXC on 26 October 2026 at 10:00 UTC.

Kyorai routes trades across more than twenty venues and more than four hundred tokens at a flat 0.50% fee. A share of those fees is used to buy KAMIRAI on the open market and burn it. The burn is public and can be checked on BscScan.

KAMIRAI has a fixed supply of 888,888,888,888, zero transfer tax and ownership renounced. As of 26 October 2026, 417,917,690,820 tokens had been burned, equal to 47.02% of total supply. The live supply after burn was 470,971,198,068.

THE FOUR FACTS THAT MATTER

- The product is live. Kyorai is not a plan.
- The sale is closed. There is no presale purchase page.
- The burn is onchain. The dead address holds the proof.
- The token is public. Trade only on verified venues.

The long term target is a live supply of 1,000,000,000. That is an objective, not a promise, a deadline or a price target.

02 / THE MARKET PROBLEM

Liquidity is fragmented.

BNB Smart Chain has deep activity, but it is spread across many pools, venues and fee tiers. A trader who checks one venue may miss a better route on another. The result is worse execution, higher friction and a poor experience for anyone outside a small group of professional traders.

At the same time, too many tokens are built around a mascot and a promise. The brand may travel, but the mechanism does not. A token with no product, no fee flow and no public proof has little to anchor it when attention moves on.

KAMIRAI is built around the opposite idea. The brand is mythic. The mechanism is an exchange token. The product is Kyorai, and the fee flow is visible.

FRAGMENTATION

Users want the best route without checking venue by venue. Kyorai compares routes and settles the trade with the user wallet.

The opportunity is not another token launch. It is a better trading surface, a clear token model and a public record that anyone can audit.

MEME FATIGUE

A story without a product fades. KAMIRAI points at a live aggregator, a real fee and a public burn instead of a slogan.

03 / THE KYORAI PRODUCT

One route. Twenty venues.

Kyorai is a live, noncustodial DEX aggregator on BNB Smart Chain. It compares routes across more than twenty venues and more than four hundred tokens, then lets the user sign the trade from their own wallet.

The fee is a flat 0.50%. Kyorai does not take custody of user funds. The wallet signs every transaction, and the trade settles onchain.

0.50%

FLAT FEE

0

CUSTODY

WHAT THE USER SEES

- A live quote before signing.
- The route and the fee before confirmation.
- A wallet signature, not a deposit.
- An onchain receipt that can be checked on BscScan.

Kyorai is available at kyorai.com. The KAMIRAI site also carries a live embedded terminal and a full screen terminal at kamirai.com/kyorai.html.

04 / THE KAMIRAI TOKEN

Fixed supply. One contract.

KAMIRAI is a BEP20 asset on BNB Smart Chain. The official contract is **0x12bfe0251Eb64c6e26d1A264673593D6164ca213**. There is one token contract. Any other address presented as KAMIRAI should be treated as suspect until verified against this document and BscScan.

888,888,888,888

TOTAL SUPPLY

The token has zero transfer tax. There is no buy tax, sell tax or transfer tax. The full amount sent arrives in the receiving wallet.

Ownership of the token contract is renounced according to the Cyberscope audit and the public contract record. The supply is fixed at 888,888,888,888.

WHAT THE TOKEN IS

KAMIRAI is the ecosystem token associated with Kyorai. It is not equity, debt or a claim on the revenue of any company. It does not carry a promise of dividends, redemption or a fixed return.

The token model is simple: a live exchange product, a fee flow that can support buyback and burn, and a public supply record.

05 / CLOSE OF THE PRESALE

The presale is closed.

The KAMIRAI presale is complete. The old presale purchase flow is no longer part of the public site. There is no new presale allocation and no claim step.

Do not send BNB or any asset to an address described as a presale contract unless it is independently verified as the official contract for a live sale. There is no live sale.

WHERE THE MARKET IS NOW

- Biconomy: KAMIRAI/USDT is live.
- MEXC: KAMIRAI/USDT is scheduled to open on 26 October 2026 at 10:00 UTC.
- Kyorai: BNB to KAMIRAI is live through the aggregator.

The official KAMIRAI site is kamirai.com. The official contract is the only address that should be used to verify the asset.

The close of the presale does not create a price, a listing guarantee or a promise of liquidity. It removes the presale from the public purchase flow and moves the asset to the listed venues.

06 / SUPPLY AND BURN

The burn is onchain.

Burns are transfers to the dead address. The token contract total supply field remains 888,888,888,888 because the contract does not reduce that field when tokens are sent to the dead address. The live supply is the total supply minus everything held at the dead address.

417,917,690,820

BURNED AS OF 26 OCTOBER 2026

47.02%

OF TOTAL SUPPLY BURNED

470,971,198,068

LIVE SUPPLY AFTER BURN

1,000,000,000

LONG TERM TARGET

HOW TO VERIFY

- Open the official token contract on BscScan.
- Read total supply: 888,888,888,888.
- Read the balance of the dead address.
- Subtract the dead balance from the total.

The target of 1,000,000,000 is a long term objective. It is not a promise that the target will be reached, nor a date by which it will happen. The burn depends on fee flow and market conditions.

07 / FEE ENGINE AND BUYBACK POLICY

The exchange funds the burn.

Kyorai charges a flat 0.50% fee on routed trades. A share of those fees is used to buy KAMIRAI on the open market and send it to the dead address.

The exact split between buyback and burn, liquidity and operations is an operating decision. The policy and the transaction proof are published as the engine runs. The split is not a fixed promise in this document.

OPERATING PRINCIPLES

- Buy only on the open market.
- Send the purchased KAMIRAI to the dead address.
- Publish the transaction hash and the amount burned.
- Do not announce exact buy levels in advance.
- Do not promise a price or a daily purchase.

Fee revenue depends on trading volume. Volume can rise or fall. A month with lower volume can produce a smaller burn or no buyback at all. No burn amount is guaranteed.

The 0.50% fee belongs to Kyorai. KAMIRAI does not charge the fee. The burn is funded by the share of Kyorai fees that is allocated to it.

08 / ACCESS AND EXCHANGES

Three ways to trade.

KAMIRAI is available on Biconomy and Kyorai. The MEXC market opens on 26 October 2026 at 10:00 UTC. Always check the official venue page and the contract before a trade.

Other venues may list the token. A listing is not an endorsement by KAMIRAI. Use the official contract to verify the asset and read the venue terms before depositing.

Verify. Then trade.

KAMIRAI has been reviewed by Cyberscope. The published score is 81/100 overall with a 95/100 security score and a low risk rating. Ownership is recorded as renounced.

The official site also reports a Gridinsoft score of 95/100 and zero VirusTotal flags. Those scores are signals, not guarantees. An audit does not remove smart contract, market, venue or operational risk.

No system is risk free. Users should test with small amounts, protect their keys and confirm the network and contract before signing.

A public community around a live product.

KAMIRAI is community owned in the sense that the token contract ownership is renounced and no admin can change the token rules. This paper does not claim a formal DAO, a legal partnership or a governance right that is not in the contract.

The community gathers on the official X account and the official Telegram group. Announcements, proof and product updates are published there. Any account that contacts a user first and asks for funds or wallet keys is not official.

COMMUNITY RULES

- Use the official channels listed in this paper.
- Never share a seed phrase or private key.
- Verify the contract before a trade.
- Do not treat community posts as financial advice.

The strongest governance signal is public behavior: the burn, the venue links, the audit and the product. Those are open to inspection by anyone.

Built. Listed. Compounding.

The roadmap is deliberately short. It describes work that is live, work that is opening and work that follows the product.

PHASE 01 / BUILT

Presale completed. Contract audited. Kyorai launched. Ownership renounced.

PHASE 02 / PUBLIC MARKET

Biconomy live. Kyorai terminal embedded on the KAMIRAI site. MEXC listing on 26 October 2026 at 10:00 UTC. CoinMarketCap profile in place.

PHASE 03 / EXPAND

Wallet listings, market data, deeper liquidity and additional venues. Each listing is assessed on access, depth and terms.

PHASE 04 / COMPOUND

Fee funded buyback and burn, monthly proof, and continued Kyorai product growth. The engine is measured by public transactions, not by slogans.

This roadmap is directional. It is not a schedule, a guarantee of delivery or a promise about price or liquidity.

What can go wrong.

Digital assets carry risk. The following list is not exhaustive, but it covers the main risks a reader should understand before trading KAMIRAI.

MARKET AND LIQUIDITY RISK

Price can fall sharply. Order books and pools can be thin. A position may be difficult to exit at the expected price, especially in a stressed market.

PRODUCT AND VOLUME RISK

Kyorai fees depend on trading volume. Lower volume means less fee revenue and a smaller or absent buyback. The product may face competition from other routers and exchanges.

SMART CONTRACT RISK

A bug, exploit or unexpected interaction could affect the token or the aggregator. An audit reduces but does not eliminate this risk. Users interact with contracts at their own risk.

VENUE AND ACCESS RISK

A centralized venue can suspend deposits, withdrawals or trading. It can change its terms or restrict a jurisdiction. Users depend on the venue for access and custody while assets are on it.

REGULATORY RISK

The treatment of digital assets differs by jurisdiction and can change. A venue, feature or access path may become unavailable. Readers are responsible for compliance with their local law.

EXECUTION RISK

Buyback and burn depend on fee flow and operating decisions. The engine may be paused, adjusted or delayed. No amount, date or price is guaranteed.

You can lose all of the value you put at risk. Do not use funds you cannot afford to lose.

Information only.

This document is provided for information only. It is not an offer to sell, a solicitation of an offer to buy, or financial, legal, tax or investment advice. It does not create any right or obligation between any reader and any person or entity.

No representation or warranty is made about the accuracy, completeness or timeliness of the information. Figures are stated as of 26 October 2026 and may change. Forward looking statements are estimates and may not be realized.

Digital assets are volatile. They may lose all value. Past performance is not a guide to future results. No return, price, liquidity or listing outcome is promised.

Readers must comply with the laws of their jurisdiction. Nothing here is tax advice. Obtain independent professional advice where needed.

Third party links are provided for access. KAMIRAI does not control those sites and is not responsible for their content or terms.

If any statement in this document is inconsistent with the live contract, the live contract and the official onchain record control.
